-------	--------	------	--------	--------

Attention! When an A/C compressor stops working, it is most often due to a faulty A/C clutch.
 Test the A/C clutch by putting 12 volts on the electrical input of the A/C compressor, when engine is switched off.
 If you hear a click sound, the clutch is working. If the A/C clutch is faulty there will be no sound at all.
 Replacing the clutch alone is relatively easy and considerably cheaper than replacing the entire compressor.
